

## Research Associate – Molecular Biology

Abeome is a small startup biotechnology company focused on the discovery and development of therapeutic monoclonal antibodies. We offer a challenging and rewarding environment to cultivate innovation and scientific excellence.

We are seeking a highly driven and talented person to join our Antibody Discovery team to support our molecular biology efforts, which are a core component of our technology.

### Responsibilities:

- Carry out high-throughput RT-PCR screening of antibody variable regions for screening
- Perform standard cloning techniques: PCR, restriction digests, agarose gel electrophoresis, gel purification, transformation, DNA purification, etc
- Continue to build, organize and maintain quality control on a large collection of antibody clones
- Analyze DNA sequences and maintain antibody sequence database
- Aid the team in innovating and advancing core technology
- Organize data and results into regular presentations to the team

### Requirements:

- BS or MS degree in Biology, Chemistry or related field
- 2+ years laboratory experience related to antibodies or molecular biology
- Industry experience is preferred
- Strong organizational skills and ability to multi-task
- Experience with mammalian cell culture and cell-based assays a plus

### To Apply:
